United States Patent and Trademark Office (USPTO)
Office Action (Official Letter) About Applicant's Trademark Application

U.S. Application Serial No. 97120370

Mark: FULTON WOODWORKING TOOLS

Correspondence Address:

NYALL ENGFIELD
16950 VIA DE SANTA FE SUITE 5060-107
RANCHO SANTA FE CA 92067 UNITED STATES

Applicant: Peachtree Woodworking Supply Inc

Reference/Docket No. MAGFU-003

Correspondence Email Address: trademarks@myamazonguy.com

NONFINAL OFFICE ACTION

The USPTO must receive applicant's response to this letter within six months of the issue date below or the application will be abandoned. Respond using the Trademark Electronic Application System (TEAS). A link to the appropriate TEAS response form appears at the end of this Office action.

Issue date: August 23, 2022

The referenced application has been reviewed by the assigned trademark examining attorney. Applicant must respond timely and completely to the issue(s) below. 15 U.S.C. §1062(b); 37 C.F.R. §§2.62(a), 2.65(a); TMEP §§711, 718.03.

SUMMARY OF ISSUES:

- 2(e)(2) - Primarily Geographically Descriptive
- Claim of Acquired Distinctiveness Unacceptable - Generic Term

SEARCH OF USPTO DATABASE OF MARKS

The trademark examining attorney has searched the USPTO database of registered and pending marks and has found no conflicting marks that would bar registration under Trademark Act Section 2(d). 15 U.S.C. §1052(d); TMEP §704.02.

SECTION 2(e)(2) REFUSAL - PRIMARILY GEOGRAPHICALLY DESCRIPTIVE

Registration is refused because the applied-for mark is primarily geographically descriptive of the origin of applicant's goods, namely, "dust removing installations for cleaning purposes; Dust separators; Dust exhausting installations for cleaning purposes". Trademark Act Section 2(e)(2), 15 U.S.C. §1052(e)(2); *see* TMEP §§1210, 1210.01(a).

A mark is primarily geographically descriptive when the following is demonstrated:

- (1) The primary significance of the mark to the purchasing public is a generally known location;
- (2) The goods or services originate in the place identified in the mark; and
- (3) The purchasing public would be likely to believe that the goods or services originate in the geographic place identified in the mark; that is, to make a goods-place or services-place association.

See Spiritline Cruises LLC v. Tour Mgmt. Servs., Inc., 2020 USPQ2d 48324, at *5 (TTAB 2020) (citing *In re Nantucket, Inc.*, 677 F.2d 95, 96-97, 213 USPQ 889, 891 (C.C.P.A. 1982)); *see also In re Newbridge Cutlery Co.*, 776 F.3d 854, 860-61, 113 USPQ2d 1445, 1448-49 (Fed. Cir. 2015); *In re Societe Generale des Eaux Minerales de Vittel S.A.*, 824 F.2d 957, 959, 3 USPQ2d 1450, 1452 (Fed. Cir. 1987); *In re JT Tobacconists*, 59 USPQ2d 1080, 1081 (TTAB 2001)); TMEP §1210.01(a).

The examining attorney refers to the definitions of the term "woodworking," "tool" and "woodworking tools" resulting from the examining attorney's search in a global computer network dictionary. See attached.

Definition No. 1: WOODWORKING - The act, art, or trade of working with wood.

Definition No. 2: TOOLS - any instrument or simple piece of equipment that you hold in your hands and use to do a particular kind of work

Definition No. 3: WOODWORKING TOOLS - the essential tools for woodworking that let users hone their craft

In other words, the plain meaning of the words "WOODWORKING TOOLS" describes the field and function, as well as the purpose and intended use of the goods for which protection is sought.

Moreover, the applicant submitted specimens of use, one of which contains the following statement thereon: "2 1/2" x 20' Clear PVC Dust Collection Hose For Use with Dust Collectors with 2-1/2" Ports. Ideal for Shop Vacuums." Evidence shows that "dust collectors" and "shop vacuums" are categorized as "woodworking tools" by industry participants.

<https://www.ahdictionary.com/word/search.html?q=woodworking>
("The act, art, or trade of working with wood.")

<https://www.collinsdictionary.com/dictionary/english/tool>
("A tool is any instrument or simple piece of equipment that you hold in your hands and use to do a particular kind of work. For example, spades, hammers, and knives are all tools.")

<https://www.yorksaw.com/beginners-guide-to-must-have-tools-for-woodworking/>
("BEGINNERS GUIDE TO MUST-HAVE WOODWORKING TOOLS")

<https://www.blacktailstudio.com/blog/essential-woodworking-tools>

("10 Essential Woodworking Tools To Start Your Shop" ... "Instead of getting an old cloth bag dust collector off Craigslist, get yourself a good cyclone separator and hook it to a shop vac or old dust collector motor. Those bags are awful for your lungs, and the cyclone separators are pretty cheap. Oneida Air Systems makes a wide variety of systems for just about any size shop or budget.")

<https://www.homedepot.com/b/Tools-Woodworking-Tools/N-5yc1vZc2gv>

("Whether you are a beginner or a DIY professional, if you have a love for the craft of woodworking The Home Depot has got you covered. We have all the essential tools for woodworking that let you hone your craft. Our huge selection of drill presses and miter saws will put the power in your hands to complete your projects faster and easier. And whether you are looking for the strength of a powerful router or the versatility of a lathe, you can find everything you need to help with projects, large and small. If your carpentry plans also include building materials, you don't need to look any further than The Home Depot. From wood and lumber to decking and fencing materials, it's all right here.

With the right tools and materials, what you build is only limited by your imagination and creativity. So why not have a little fun with the kids and teach them something at the same time? Our woodworker tools and woodworking supplies will help you put together an easy birdhouse, squirrel feeder or butterfly house.")

Here, the asserted mark includes the geographic reference "FULTON". Further, the initial application specifies that the applicant is located in "Peachtree Corners, Georgia," which borders "Fulton County."

See attached from:

<https://whatsanswer.com/usa/peachtree-corners-fulton-county-ga-zip-code/>

("Peachtree Corners GA Zip Code | Peachtree Corners City, Fulton County Zip Code")

<https://www.indeed.com/q-Fulton-County-Ga-l-Peachtree-Corners,-GA-jobs.html?vjk=566edba82100160e>

("Fulton County Ga jobs in Peachtree Corners, GA")

https://en.wikipedia.org/wiki/Peachtree_Corners,_Georgia

("Peachtree Corners is located in the western corner of Gwinnett County, 21 miles (33 km) from downtown Atlanta. Seven miles of the Chattahoochee River define the northern and western border of Peachtree Corners, and it is bordered by the cities of Dunwoody, Doraville, and Sandy Springs (DeKalb and Fulton counties) on the west, Buford Highway and Norcross city limits on the south, Roswell and Johns Creek (both in Fulton County) across the Chattahoochee River on the north, and the city limits of Berkeley Lake and Duluth on the east...") (citations omitted)

As such, it is reasonable to conclude the geographic reference "FULTON COUNTY" pertains to the "FULTON" reference in the initial application specifying the applicant's location as well as the geographic origin of the goods.

If the most prominent meaning or significance of a mark is geographic for the goods in the application, the fact that the mark may have other meanings in other contexts does not alter its geographic significance in the context of the application. See *In re Opryland USA Inc.*, 1 USPQ2d 1409, 1412-13 (TTAB 1986) (holding the mark THE NASHVILLE NETWORK primarily geographically descriptive of television program production and distribution services when finding that the primary significance of

the term referred to Nashville, Tennessee and not that of a style of music); *In re Cookie Kitchen, Inc.*, 228 USPQ 873, 874 (TTAB 1986) (noting that where MANHATTAN refers to a type of cocktail and to a geographic location that having an alternative meaning does not alter the mark's primary geographic significance in the context of the goods in the application); *In re Jack's Hi-Grade Foods, Inc.*, 226 USPQ 1028, 1029 (TTAB 1985) (noting that where NEAPOLITAN refers to a type of ice cream and also means "pertaining to Naples, Italy" that having an alternative meaning does not alter the mark's primary geographic significance in the context of the goods in the application); TMEP §1210.02(b)(i).

In addition, the addition of generic or highly descriptive wording to a geographic word or term does not diminish that geographic word or term's primary geographic significance. TMEP §1210.02(c)(ii); *see, e.g., Spiritline Cruises LLC v. Tour Mgmt. Servs., Inc.*, 2020 USPQ2d 48324, at *6-7 (TTAB 2020) (holding CHARLESTON HARBOR TOURS primarily geographically descriptive of various travel tour and cruise services because TOURS is generic for the services and CHARLESTON HARBOR is a well-known harbor in Charleston, South Carolina); *In re Hollywood Lawyers Online*, 110 USPQ2d 1852, 1853-54 (TTAB 2014) (holding HOLLYWOOD LAWYERS ONLINE primarily geographically descriptive of attorney referrals, online business information, and an online business directory).

Marks comprising geographic wording coupled with additional wording and/or design elements must be considered as a whole and should not be dissected; however, a trademark examining attorney may consider the significance of each element separately in the course of evaluating the mark as a whole. *See In re Save Venice N.Y. Inc.*, 259 F.3d 1346, 1352, 59 USPQ2d 1778, 1782 (Fed. Cir. 2001) (citing *In re Nat'l Data Corp.*, 753 F.2d 1056, 1058, 224 USPQ 749, 751 (Fed. Cir. 1985)). Greater weight may be accorded the dominant feature. *See In re Wada*, 194 F.3d 1297, 1300, 52 USPQ2d 1539, 1541 (Fed. Cir. 1999).

"FULTON WOODWORKING TOOLS" is primarily geographically descriptive of woodworking tools produced in or near the geographic location of the county of "FULTON," which borders "Peachtree Corners" in Georgia, the stated location of applicant as set forth in the initial application. That is, the primary significance of the mark to the purchasing public is a generally known location, "FULTON"; the goods originate in the place identified in the mark, according to the initial application; and, consumers are likely to make a goods-place being that the owner makes the following statement on its website:

Peachtree Woodworking Supply Inc. is a small woodworking supply company, based out of Atlanta, Georgia. As you surf through our web site you will find a great selection and various ideas for your own woodworking shop. Our goal is to provide you with the hard to find woodworking tools and accessories.

See attached from:

https://www.ptreeusa.com/about_us.htm

("Peachtree Woodworking Supply Inc. is a small woodworking supply company, based out of Atlanta, Georgia. As you surf through our web site you will find a great selection and various ideas for your own woodworking shop. Our goal is to provide you with the hard to find woodworking tools and accessories.")

The applicant should note in particular the statement, "Our goal is to provide you with the hard to find woodworking tools and accessories," as the statement evinces generic use of the term "woodworking tools," namely, the type of tools provided by the applicant to consumers in a more localized manner,

consistent with others in the industry that offer tools, for which the applicant claims it has acquired distinctiveness. See below.

For the above-noted reasons, the application is refused registration for being primarily descriptive in relation to the goods.

Although applicant's mark has been refused registration, applicant may respond to the refusal(s) by submitting evidence and arguments in support of registration.

SECTION 2(f) ACQUIRED DISTINCTIVENESS

Applicant asserted a claim of acquired distinctiveness under Trademark Act Section 2(f) based on use of the mark in commerce with the goods and/or services for five years prior to the date on which the claim is made. *See* 15 U.S.C. §1052(f). However, as the attached evidence demonstrates, the allegation of five years' use is insufficient to show acquired distinctiveness because the applied-for mark is highly descriptive, if not generic, of applicant's goods. *See In re La. Fish Fry Prods., Ltd.*, 797 F.3d 1332, 1336-37, 116 USPQ2d 1262, 1265 (Fed. Cir. 2015); *In re Virtual Independ. Paralegals, LLC*, 2019 USPQ2d 111512, at *11-12 (TTAB 2019); TMEP §1212.05(a). An applicant's evidentiary burden of showing acquired distinctiveness increases with the level of descriptiveness of the mark sought to be registered; as in this case, a more descriptive term requires more evidence. *Royal Crown Co. v. Coca-Cola Co.*, 892 F.3d 1358, 1365, 127 USPQ2d 1041, 1045 (Fed. Cir. 2018) (citing *In re Steelbuilding.com*, 415 F.3d 1293, 1300, 75 USPQ2d 1420, 1424 (Fed. Cir. 2005)); *In re GJ & AM, LLC*, 2021 USPQ2d 617, at *37-38 (TTAB 2021). As the mark in this case is highly descriptive, applicant's evidence is not sufficient to show acquired distinctiveness.

Applicant may respond by providing additional evidence of acquired distinctiveness, such as verified statements of long-term use, advertising and sales expenditures, examples of advertising, affidavits and declarations of consumers, and customer surveys. *See* 37 C.F.R. §2.41(a)(3); TMEP §§1212.02(g), 1212.06 *et seq.*

When determining whether the evidence shows the mark has acquired distinctiveness, the trademark examining attorney will consider the following six factors: (1) association of the mark with a particular source by actual purchasers (typically measured by customer surveys linking the name to the source); (2) length, degree, and exclusivity of use; (3) amount and manner of advertising; (4) amount of sales and number of customers; (5) intentional copying; and (6) unsolicited media coverage. *See Converse, Inc. v. ITC*, 909 F.3d 1110, 1120, 128 USPQ2d 1538, 1546 (Fed. Cir. 2018) ("the *Converse* factors"). "[N]o single factor is determinative." *In re Steelbuilding.com*, 415 F.3d at 1300, 75 USPQ2d at 1424; *see* TMEP §§1212.06 *et seq.* Rather, all factors are weighed together in light of all the circumstances to determine whether the mark has acquired distinctiveness. *In re Steelbuilding.com*, 415 F.3d at 1300, 75 USPQ2d at 1424. This evidence must demonstrate that the relevant public understands the primary significance of the mark as identifying the *source* of applicant's product or service rather than identifying the product or service itself. *In re Steelbuilding.com*, 415 F.3d at 1297, 75 USPQ2d at 1422.

As well as submitting additional evidence, applicant may respond to the refusal by arguing in support of registration and/or amending the application to seek registration on the Supplemental Register. *See* 15 U.S.C. §1091(a); 37 C.F.R. §§2.47, 2.75(a); TMEP §816. If applicant amends the application to the Supplemental Register, applicant is not precluded from submitting evidence and arguments against this refusal. TMEP §816.04.

An applicant bears the burden of proving that a mark has acquired distinctiveness under Trademark Act Section 2(f). *In re La. Fish Fry Prods., Ltd.*, 797 F.3d 1332, 1335, 116 USPQ2d 1262, 1264 (Fed. Cir. 2015) (citing *In re Steelbuilding.com*, 415 F.3d 1293, 1297, 75 USPQ2d 1420, 1422 (Fed. Cir. 2005)); TMEP §1212.01. “To show that a mark has acquired distinctiveness, an applicant must demonstrate that the relevant public understands the primary significance of the mark as identifying the source of a product or service rather than the product or service itself.” *In re Steelbuilding.com*, 415 F.3d at 1297, 75 USPQ2d at 1422.

Allegations of sales and advertising expenditures do not per se establish that a term has acquired significance as a mark. See TMEP §1212.06(b). An applicant must also provide the actual advertising material so that the examining attorney may determine how the term is used, the commercial impression created by such use, and the significance the term would have to prospective purchasers. TMEP §1212.06(b); see *In re Boston Beer Co.*, 198 F.3d 1370, 1373, 53 USPQ2d 1056, 1058 (Fed. Cir. 1999); *In re Packaging Specialists, Inc.*, 221 USPQ 917, 920 (TTAB 1984).

The ultimate test in determining acquisition of distinctiveness under Section 2(f) is not applicant’s efforts, but applicant’s success in educating the public to associate the claimed mark with a single source. *In re LC Trademarks, Inc.*, 121 USPQ2d 1197, 1208 (TTAB 2016) (quoting *Mini Melts, Inc. v. Reckitt Benckiser LLC*, 118 USPQ2d 1464, 1480 (TTAB 2016)); TMEP §1212.06(b).

Currently, the record does not reflect that the applicant coined the term "Woodworking tools," that the applicant is the sole user of the term, that the applicant is the most visible user of the term, and/or the nature of the remedy where the Office not only has allowed use of the term in identifications prior to the applicant's stated use, but also has deemed the term generic. See above. The record must clarify the issues raised herein to assert successfully a claim of acquired distinctiveness with respect to the term "WOODWORKING TOOLS" when used in connection with "dust removing installations for cleaning purposes; Dust separators; Dust exhausting installations for cleaning purposes" where the woodworking industry classifies such goods as "woodworking tools." Indeed, it is noted that the applicant has used "woodworking tools" generically in its prior Registration No. 5620098. See attached.

Peachtree Corners, Georgia

From Wikipedia, the free encyclopedia

Peachtree Corners, Georgia

Peachtree Corners is a city in Gwinnett County, Georgia, United States. It is part of the Atlanta metropolitan area, and is the largest city in Gwinnett County with a population of 42,243 as of the 2020 US Census.^[4] Peachtree Corners is the only Atlanta northern suburb developed as a planned community.^[5] The city is bordered to the north and west by the Chattahoochee River and is located east of Dunwoody.

History [edit]

Settlement [edit]

Prior to 1818, the western corner of what became Gwinnett County was Creek and Cherokee territory, and it was illegal for white families to settle there.^[6] Nevertheless, there were several families of white squatters in the area before settlement was legalized, including Isham Medlock, whose name is lent to Medlock Bridge Road. In the early 1800s, a road was built along a Native American trail from what is now Buford, past what is now Peachtree Corners, to what is now Atlanta.^[6] A small farming community, known as "Pinckneyville," grew up along that road. By 1827, the community was home to the second school in Gwinnett County, the Washington Academy, founded on what is now Spalding Drive. The area was also home to a post office, saloon, blacksmith shop, carpenter shop and inn; however, the prosperity of Pinckneyville was to be short-lived.

In 1870, a railroad was built through neighboring Norcross, and due to the heavy trading that could be done via the railroad, all of the area's businesses and many residents moved from Pinckneyville to Norcross.^{[6][7]}

Population (2020)	

Urban development [edit]

For the next century, the area remained a rural farming community. In the late 1960s, Paul Duke developed the idea of creating Peachtree Corners, a planned community to be constructed in the area that was once known as Pinckneyville.^[6] In 1967, Duke initiated the planning of the office component of Peachtree Corners. Technology Park Atlanta, a campus for high technology industries that would benefit from employing engineers and business people graduating from the Georgia Institute of Technology (Georgia Tech), the University of Georgia, and other universities with technology and business schools.^[8] As a member of the Georgia Tech National Advisory Board, he raised \$1.7 million to develop the business center.^[9] Initial residents of the technology park included GE, Scientific Atlanta (now part of Cisco Systems), and Hayes Microcomputer Products. In 1968, Duke established Peachtree Corners, Inc., a development corporation for the residential parts of the community.^[10]

During the 1970s, Jim Cowart began to develop the neighborhoods that Duke had planned. Initial neighborhoods developed by Cowart included Peachtree Station,^[6] Chattahoochee Station, and Spalding Corners. During this period, Cowart developed more upscale housing and laid more sewer pipes than the rest of Gwinnett County.^[11]

Incorporation [edit]

The United Peachtree Corners Civic Association (UPCCA), an umbrella group of neighborhood homeowners' associations, was formed in 1993 in response to land use and development concerns in the area.^[12] Despite the efforts of the UPCCA, some development opposed by the UPCCA continued in Peachtree Corners throughout the 1990s; therefore, in 1999, the idea of incorporating Peachtree Corners was first proposed.^[13] Nonetheless, due to the complexity of existing law, an incorporation movement did not then materialize.^[14] A city of Peachtree Corners was again proposed by the UPCCA in 2005, but efforts were abandoned after a straw survey of some residents seemed to indicate that the majority did not support incorporation.^[15]

In 2010 the UPCCA again pursued the incorporation of Peachtree Corners^[16] after a failed attempt by the city of Norcross to annex a portion of Technology Park Atlanta.^[17] In a referendum held on November 8, 2011, residents of Peachtree Corners voted to incorporate as Gwinnett County's 16th city, and, with a population of 43,059,^[17] it became the county's largest. Municipal operations began on July 1, 2012.^{[18][19][20]}

Geography [edit]

Peachtree Corners is located in the western corner of Gwinnett County, 21 miles (33 km) from downtown Atlanta. Seven miles of the Chattahoochee River define the northern and western border of Peachtree Corners, and it is bordered by the cities of Dunwoody, Doraville, and Sandy Springs (DeKalb and Fulton counties) on the west, Buford Highway and Norcross city limits on the south, Roswell and Johns Creek (both in Fulton County) across the Chattahoochee River on the north, and the city limits of Berkeley Lake and Duluth on the east.^[21]

Demographics [edit]

2020 census [edit]

Peachtree Corners racial composition^[23]

Race	Num.	Perc.
White (non-Hispanic)	18,981	44.93%
Black or African American (non-Hispanic)	9,557	22.62%
Native American	72	0.17%

Website	peachtreecornersga.gov

The now-defunct Jones Bridge (1904) once connected Pinckneyville to Alpharetta.

The Chattahoochee River, seen here at Jones Bridge Park, flows through many of Peachtree Corners' neighborhoods.

Historical population		
Census	Pop.	%±
2020	42,243	—
U.S. Decennial Census		

As of the 2020 United States census, there were 42,243 people, 16,905 households, and 10,666 families residing in the city. The median household income (in 2019 dollars) was \$71,149, and the per capita income was \$43,783.

2017 [edit]

Since Peachtree Corners was not a city or a census-designated place at the time, no demographic data is available for the city from the 2010 U.S. Census. However, the city contains ZIP code 30092, which in 2017 had an average adjusted gross income (AGI) of \$69,905 per household. The median home price in 2017 for Peachtree Corners was \$325,000.^[24] As of 2017, Peachtree Corners was 60.2% White American, 23.3% African American, 9.6% Asian American, and 2.5% two or more races. Hispanic Americans of any race made up 14% of the population.^[25] Those living in the same house more than one year were 86.9% of the population, an average of 2.62 persons lived in each household, of the population 94.1% had a high school diploma or higher, 52.6% had a Bachelor's degree or higher with 19% of the population having a Master's degree or higher,^[26] and, not counting library or school supplied computers, 96.5% of the population or above had home computers. ZIP Code 30092 had a population of 38,008 at the 2010 census; however, with parts of ZIP Codes 30071, 30096, 30097, and 30360 being within the city limits of Peachtree Corners, the estimated population of the city was 43,509 in 2017 with a population increase of 14.5% from 2010.^[27]

Economy [edit]

The economy of Peachtree Corners is largely driven by the concentration of businesses in planned office parks, particularly engineering firms, logistics organizations, health technology groups, and information technology companies.^{[28][29]}

In October 2014, United Arab Shipping Company relocated its North American Headquarters to Peachtree Corners. The company purchased a 50,000 square foot office building on Spalding Drive for logistics, accounting and customer

service operations. In 2017 it merged with Hapag-Lloyd, keeping its headquarters in Peachtree Corners, investing an additional \$5.5 million, and adding 365 new jobs to expand its offices. With 230 vessels and more than 12,000 employees, Hapag-Lloyd is the fifth-largest shipping company in the world, serving customers in 127 countries.^{[30][31][32][33]}

In May 2016, Comcast Corporation, the American global telecommunications conglomerate and owner of Xfinity and NBCUniversal, relocated its Southeast Headquarters to the Wells Building, a 10-story office building in Peachtree Corners.^{[34][35]}

In August 2021, the NASDAQ-100 and S&P 500 company, Intuitive Surgical announced its expansion of its Peachtree Corners facility, building an additional \$600 million dollar, 750,000 square foot, net zero carbon footprint, medical campus in the city, adding 1,200 new jobs and adding to the cluster of many medical, biomedical, biopharmaceutical, and health information technology companies that are in Peachtree Corners.^{[36][37]}

Sollent Health, a leading provider of specialized healthcare and education staffing services to hospitals and schools around the nation, expanded its Peachtree Corners headquarters to 83,000 square feet.^[38]

Amazon, CarMax and Mass Mutual as well as Honeywell, Sprint Corporation, Siemens Industry Automation, Valmet, Fleetcor, Crawford & Company, ASHRAE, ACI Worldwide, Simmons Bedding Company, and CMD Group are among the over 2,300 businesses with a presence in Peachtree Corners. ASHRAE's world headquarters moved to Peachtree Corners Technology Park Atlanta, with the company investing \$15.7 million in its Peachtree Corners world location.^{[37][38][39][40][41][42][43]} The Harlem Globetrotters are headquartered in Peachtree Corners as well as the Southern Section of the United States Tennis Association (USTA).^[44] Peachtree Corners has 12 hotels^[45] to serve business travelers and visitors including Hilton,^[46] Marriott,^[47] and Hyatt.^[48]

Jointly working with Deutsche Telekom's T-Mobile and Georgia Tech, Peachtree Corners developed a 5G incubator known as Curiosity Lab^[49] located in a 500-acre smart city technology park in the city, one of the nation's first smart city environments.^[50] The facility features a 25,000 square foot Innovation Center and 3-mile autonomous vehicle test track and provides developers the ability to build and test such things as autonomous vehicles, robotics, industrial drone applications, mixed reality training and entertainment, remote medical care, personal health and fitness wearables, and other technologies.^[51] Jacobs Engineering Group, Peachtree Corners, Delta Air Lines, Bosch, Cisco Systems, and Qualcomm are also jointly working to deploy smart system technologies in the city through technology that connects vehicles and infrastructure, focusing initially on roadside infrastructure, traffic management, and road safety.^{[52][53]} Further, Peachtree Corners is host to the Vehicle-to-everything (V2X) conference which involves development of intelligent transport systems including Vehicle-to-vehicle (V2V), Vehicle-to-infrastructure (V2I), and Vehicle-to-Pedestrian (V2P) communications and includes biometric technology, managing cities autonomously, and developing highway systems to make transportation safer, reduce traffic congestion, and reduce the environmental impact of automobiles and other road vehicles.^{[52][54]} Curiosity Lab was named winner in IDC Government Insights' Fourth Annual Smart Cities North America Awards for Transportation.^[55]

The French-American Chamber of Commerce moved its operations from the Consulate General of France in Atlanta to office space within the Innovation Center at Curiosity Lab. In relation to the movie La French Tech – a French government-supported ecosystem of startups, investors, decision-makers and community builders – will expand collaboration with Peachtree Corners as it guides companies looking to develop technologies and expand into North America.^[56]

Funded by the city, Peachtree Corners has produced a non-profit business incubator affiliated with the Technology Development Center at Georgia Tech as part of the city's Curiosity Lab that provides for software and hardware technology startups, providing these companies with the support they need to launch new products and grow.^[57]

Located in Peachtree Corners are both the Peachtree Corners Business Association and the Southwest Gwinnett Chamber of Commerce (made up of citizens of Berkeley Lake, Norcross, and Peachtree Corners), which members range from Fortune 500 companies to small to midsize companies that are located in the greater metro Atlanta area. The Peachtree Corners Business Association has been named "Best of Gwinnett" for 2018,^[58] '19, and '20.^{[59][60]}

Building on Triangle Parkway in winter

Arts and culture [edit]

Annually, Peachtree Corners' "Art on the Chattahoochee" is held along the banks of the Chattahoochee River at Jones Bridge Park that attracts visitors who peruse the work of artists. Also featured are live demonstrations and performing arts including solo, acoustic and group performances, as well as a Budding Artist Kid's Zone with activities including craft stations, spin and chalk art, and food and refreshments.^[58]

Peachtree Corners has an annual Summer Concert Series set on the Town Green at the city's Town Center featuring performers from across the nation.^[59]

Other annual events include the "Peachtree Corners Festival" that includes arts and crafts, live music, shows, and food, as well as the "Holiday Glow on the Town Green" evening event featuring live choral performances, the Holiday Glow in the Corners Parade, and the lighting of the great tree.^{[60][61][62][63]}

The Gwinnett County Public Library system operates the Peachtree Corners branch in Peachtree Corners.^[64]

Parks and recreation [edit]

Peachtree Corners has multiple parks including the Chattahoochee River National Recreation Area along the Chattahoochee River, the Medlock Bridge Chattahoochee River National Recreation Area with river access,^[65] the 12 acre Holcomb Bridge Park overlooking the river and having improvements including an amphitheater,^[66] the 30 acre Jones Bridge Park with pavilions, a community building, soccer fields, other enhancements, and river frontage,^[67] as well as the 93 acre multiple amenity Pinckneyville Park.^[68] The 227-acre (918,636.41 m²) Simpsonwood Park has 2,140 linear feet (652.27 m) of river frontage along the Chattahoochee River.^[69]

Peachtree Corners is home to the headquarters for the Southern Section of the United States Tennis Association (USTA).^[44] Many neighborhoods have swimming, exercise, garden, clubhouse, and tennis facilities, and the public membership Life Time Athletie, and Tennis - Peachtree Corners has indoor and outdoor tennis courts including a tennis stadium, fitness accommodations, indoor and outdoor pools, classes, programs, and other amenities.^[70]

Peachtree Corners has several membership fitness centers in addition to the Robert D. Fowler Family YMCA,^{[71][72]} as well as a multi-lane bowling center and restaurant.^[73]

There are many nearby golf clubs, some with restaurants, bars, fitness centers, swimming pools, reception rooms, and/or accommodations.^{[74][75][76][77][78][79]}

The city has an indoor amusement park called Nitro Zone with 127,000sqft of activities.^[80]

Peachtree Corners has an outdoor mall, The Forum on Peachtree Parkway, with multiple restaurants and boutique shops. The Peachtree Corners Town Center, which is on the other side of Peachtree Parkway across from The Forum, also has multiple restaurants, as well as a movie theater, an amphitheater, a 2,500-square-foot Veterans Monument organized by the Peachtree Corners Veterans Monument Association, and the Town Green.^{[81][82]} The \$103 million project was developed in a partnership between the city government of Peachtree Corners and Fuqua Development.^[82] A thrust arch style 14-foot wide walkway pedestrian bridge crossing Peachtree Parkway features two elevators and two sets of stairs and connects the Town Center and The Forum. The bridge also connects to a trail along the stream that is adjacent to the Town Center that is part of the Corners Connector Trail system, which system provides passage to trails along Peachtree Corners Circle and Medlock Bridge Road as well as to paths that stretch north to the city of Duluth and beyond.^[83]

Each year Peachtree Corners conducts public participation road running events including the four mile (6.437 kilometers) "Light Up The Corners Glow Run" and the one kilometer "Twilight Trot".^[84]

View of the central fountain in The Forum in Peachtree Corners, Georgia, USA

Government [edit]

The City of Peachtree Corners was incorporated on July 1, 2012.^[85] and provides many services. These include land-use planning, zoning, infrastructure maintenance and improvements, capital improvements, other public works, zoning enforcement, promulgation of building and environmental ordinances, business licensing and enforcement of them, and solid waste collection, among others.^[86] Peachtree Corners has a Council-Manager form of government. The city is governed by a mayor and six city council members which are elected to four-year terms.^[87] The city employees Peachtree Corners has in charge of day-to-day operations include a city manager, city clerk, and a community development director.^[88] The city also has code enforcement personnel,^[89] building officials,^[90] and department directors.^[91] Departments in the city include Communications, Community Development, Finance, Downtown Development Authority, and Public Works.^[92] The city has its own municipal court and employs a city attorney.^{[93][94]} The city is authorized to collect property taxes of up to one millage a year^[95] though the city has thus far operated only on business license, franchise and other fees without levying any property taxes. Because of this, Peachtree Corners has lower county taxes than unincorporated Gwinnett County.^[96] SPLOST, Georgia Department of Transportation, and federal grant dollars contribute to the funding of capital projects.^[97]

Education [edit]

Gwinnett County Public Schools (GCPSS) serves Peachtree Corners through Duluth High School, Norcross High School (the only GCPSS school with a IB Diploma Programme), Paul Duke STEM High School, Gwinnett School of Mathematics, Science, and Technology, McClure Health Science High School, Duluth Middle School, Pinckneyville Middle School, Simpson Elementary School, Peachtree Elementary School, and Berkeley Lake Elementary School.^[98]

Wesleyan School (K-12th grade) and Cornerstone Christian Academy (K-8th grade) are private schools located in Peachtree Corners.^{[99][100]}

A charter school, the International Charter Academy of Georgia (ジョージア・チャータード・スクール Jōjia Chātādō Sukuru) opened in 2018 for K-5th grade.^[101] The new charter school has a bilingual English and Japanese education program.^[102] In 2021 it had 165 students, some of whom attend the school in order to learn Japanese and others being Japanese children temporarily living in the United States. Parents are allowed to attend events held by the Japan-America Society of Georgia (ジョージア日本協会 Jōjia Nihonkai Kyōkai).^[103]

Nearby is another charter school, the New Life Academy of Excellence (K-8th grade) that has a bilingual English and Chinese education program.

The Gwinnett County Public Library system operates the Peachtree Corners branch in Peachtree Corners.^[104]

Media [edit]

See also: *Media in Atlanta*

As part of the Metro Atlanta area, the city's primary network-affiliated television stations are WXIA-TV (NBC), WGCL-TV (CBS), WSB-TV (ABC), and WAGA-TV (Fox). There are seven additional local stations that are accessible over the air without the need of cable, etc. access. The city also is served by WGTV and WPBA, which are PBS member stations, with WGTV being the flagship station of the statewide Georgia Public Television network.^[105] Several TV services provide Peachtree Corners with cable, DSL, fiber and satellite TV broadcasts and Internet including AT&T U-Verse/DIRECTV,^[106] Charter/Spectrum,^[107] Comcast/Xfinity,^[108] and DISH Network.^[109]

Additionally, there are approximately 23 business Internet providers for Peachtree Corners.^[110]

The city is served by approximately 50 radio stations and by two daily newspapers, the *Atlanta Journal-Constitution* and the *Gwinnett Daily Post*, with the *Daily Post* being Gwinnett County's legal organ.^[111]

Peachtree Corners has a website that supplies information about the city and where residents can subscribe to emails that regularly supply information to them. The city publishes a bimonthly feature magazine, *Peachtree Corners Magazine*, available in print and online, that informs readers about new city events and discusses topics related to the city.^[112] It is mailed to residents for free, and is also distributed to multiple points around the city. The city also publishes the *Peachtree Corners Business Newsletter*, a monthly business newsletter to promote 2-way communication between the city and its business community.^[113]

The former site of BJ's Wholesale Club was used as the set of the 2012 movie *The Watch* starring Ben Stiller, Vince Vaughn, and Jonah Hill.^[114] A home on Fitzpatrick Way in Peachtree Corners was used as a filming location for the 2015 movie *Barely Lethal* starring Sophie Turner, Jessica Alba, and Samuel L. Jackson. The film used Simpsonwood Park as the staging area.^[115] In 2021, Jones Bridge Park and the area of Peachtree Industrial Blvd. and Holcomb Bridge Rd. in Peachtree Corners were the sites of the filming of season 4 of the Netflix production of *Ozark* starring Jason Bateman, Laura Linney, Julia Garner, Jordana Spiro, Jason Butler Harner, Esai Morales, Peter Mullan, Janet McTeer, and others.^[116]

Infrastructure [edit]

Transportation [edit]

Roads [edit]

Peachtree Corners is in proximity to many major highways in Metro Atlanta, such as I-285, I-85, GA 316, and GA 400. The city is approximately 21 miles (33 km) northeast of downtown Atlanta. A number of collector roads distribute traffic around the city, including GA 141 (Peachtree Parkway/Medlock Bridge Road), GA 140 (Holcomb Bridge Road), Peachtree Corners Circle, Spalding Drive and Peachtree Industrial Boulevard.^[117]

Ga Route 141 - Peachtree Parkway in Peachtree Corners

Electric Vehicle and Infrastructure Support [edit]

Peachtree Corners has implemented support for electric vehicles having installed one of the State of Georgia's largest electric vehicle charging facilities that provides charging without cost to users, and installing the country's first roadway surface solar panel system to support it, with plans for further expansion of roadway solar power collection and charging facilities and including solar power for existing infrastructure across the city by installing other types of panels that may include sidewalk, bike lane, and other surface collectors.^{[118][119]}

Transit [edit]

Gwinnett County Transit serves the city. The Metropolitan Atlanta Rapid Transit Authority (MARTA)'s Doraville Rapid Rail Station is approximately 5.7 miles (9 km) from Peachtree Corners, while the Chamblee Rapid Rail Station is approximately 9.3 miles (14.9 km) away. MARTA provides rapid heavy rail service and connecting services to Atlanta, Hartsfield–Jackson Atlanta International Airport, and other points north, south, east and west. The city also has an operating autonomous shuttle that operates on a stretch of road on Technology Parkway.^[120]

Airports [edit]

Peachtree–DeKalb Airport is a county-owned, public-use airport approximately 7.9 miles (13 km) from Peachtree Corners. Gwinnett County Airport is a municipal airport located about 18 miles (29 km) from the city. Hartsfield–Jackson Atlanta International Airport, which is a major passenger hub for domestic and international travelers, is located 29 miles (46 km) south of Peachtree Corners. It is accessible by I-85, I-285, and MARTA.

Pedestrians and cycling [edit]

The Western Gwinnett Bikeway is a multi-use trail along Peachtree Industrial Boulevard. It is a shared use path, cycle track, and bike lane connecting to neighboring Duluth and Norcross.^[121] Peachtree Corners has been adding additional sidewalks and safety upgrades for pedestrians, thus far adding many miles of sidewalks, additional pedestrian safety crossings, and adding 175 street lights, all designed to make the city more walkable, safer and more connected. The city also has a 14-foot wide walkway arch truss pedestrian bridge with elevators and stairs over S.R. 141 (Peachtree Parkway) for pedestrians walking between The Forum and the Town Center.^{[83][97][122][123]} The city is also adding to a multi-use trail system (the Corners Connector Trail system) that crisscrosses the city linking office parks, restaurants, retail centers, the new town center and surrounding neighborhoods.^{[124][125]} In addition, the city has launched the world's first fleet of shared E-scooters with teleoperated repositioning.^[120]

Pedestrian Bridge built by the City over Peachtree Parkway

Software [edit]

Peachtree Corners has its own smartphone app, "CornersConnect", for the use of citizens and visitors to keep up with events, dining, entertainment, public parks, bus routes, city information, and news, and to help users pay their water bill, county property taxes, to register to vote, and to photograph and report areas that need improvement across the city.^[126]

Notable people [edit]

- David Andrews, NFL football player with the New England Patriots.^[127]
- Scott Hilton - American banker and politician.^{[128][129]}
- Chandler Massey, actor (*Days of Our Lives*); received the 2012, 2013, and 2014 Daytime Emmy Award for Outstanding Younger Actor in a Drama Series. In 2012, Massey became the first actor ever to receive a Daytime Emmy Award for playing a gay character.^[130]
- James Ramsey, Major League Baseball player with the Los Angeles Dodgers.^[131]
- Trey Thompkins, basketball player formerly with Los Angeles Clippers.^[132]
- Brice Butler, NFL wide receiver with the Dallas Cowboys.^[133]
- Jodie Meeks, NBA shooting guard with the Washington Wizards.^[134]

HOW TO USE THE DICTIONARY

To look up an entry in *The American Heritage Dictionary of the English Language*, type it in the search window above. For best results, after typing in the word, click on the "Search" button instead of using the "enter" key.

Some compound words (like *bus rapid transit*, *dog whistle*, or *identity theft*) don't appear on the drop-down list when you type them in the search bar. For better results with compound words, place a quotation mark before the compound word in the search window.

GUIDE TO THE DICTIONARY

THE USAGE PANEL

The Usage Panel is a group of nearly 200 prominent scholars, creative writers, journalists, diplomats, and others in occupations requiring mastery of language. Annual surveys have gauged the acceptability of particular usages and grammatical constructions.

THE PANELISTS

wood-work-ing (woōd'wûr'king)
n.
The act, art, or trade of working with wood.

Woodworking means different things to different folks. Many woodworkers create useful and long-lasting pieces to relieve stress and exercise their creative muscles. They're hobbyists who know sawdust is good for the soul. Others turn professional. They're handsomely compensated for skills in building coveted furniture. But no matter if you're a master craftsperson or a rank amateur, you need the must-have tools for woodworking. Read this entire guide for information on these tools. In short, the must-have tools for woodworking include the following:

- Hand saws
- Power saws
- Planes
- Sanders
- Files
- Hammer
- Mallet

- Workbench

Many beginning woodworkers feel overwhelmed with the vast array of tools available on the market. It's easy for you to rack up thousands of dollars' worth of expensive woodworking tools in your shop. Most tools for beginner woodworkers don't have to be elaborate and costly, though. Beginners' woodworking tools should start with the basics so you can get the feel of simplicity that's the core of great work.

There are five classes of basic woodworking tools. Those are tools to cut, finish, assemble, measure and hold wooden parts while transforming raw materials into completed projects. These tool groups cover everything a starting woodworker needs for building simple to complex items. To help prioritize what should go in your basic toolbox, here's a beginner's guide to must-have tools for woodworking.

SAWS USED FOR WOODWORKING

Almost every component in a woodworking project starts with cutting materials. The best and most interesting pieces start with rough lengths of wood. Whether that's hardwood like oak or softwood like pine, wood stock needs ripping and crosscutting to start taking shape. Saws are the answer, but they come in different shapes and sizes. They're also for different cutting tasks. Here's what you need to begin building your saw collection.

CIRCULAR SAW

If there's one power-activated saw belonging in every beginner's box, it's a circular saw. There are endless brands available, but they all have a common feature. That's a round or circular blade full of sharp teeth that tear through wood. All circular saws are electric, although they come in various power ratings. Most are corded tools running on household current, but there have been great advances in cordless circular saws.

Some view circular saws as more ideal for rough carpentry than for fine woodworking. That's not true at all. In the right hands, circular saws cut straight, clean lines. A lot depends on the blade you use.

Circular saw blades come in three types:

- **Ripping Blades:** Cut material lengthwise along or with the grain
- **Crosscut Blades:** For sawing across the grain
- **Combination Blades:** Designed for both ripping and crosscutting

The difference between blades is their teeth design. Ripping blades have evenly spaced teeth, while crosscuts have staggered ones. Combination blades have both tooth layouts. If budget is your concern, it's best to invest in one good combination blade fitted with carbide teeth. It's also necessary to understand blade diameters. Circular blades start at 7 ½", though 10" blades are common, and 12" diameters are available for large dimensional woodcutting.

Circular saws are available in two distinct designs. One is a direct drive where the blade is mounted 90 degrees to the motor and directly on the arbor. Direct drives are the most common circular saw and the least expensive. Worm drive circular saws are made for heavy work. They still have the same blade designs, but the blade is gear-driven ahead of the motor.

JIGSAW

Every beginning woodworker should invest in a decent jigsaw. They're also called saber saws because of their reciprocating, saber-like blade. These electric power tools are designed to make intricate cuts that can be straight, curved or serpentine. Think of the lines in a jigsaw puzzle, and you'll know what a jigsaw is capable of.

Jigsaws are completely different than circular saws. Instead of revolving blades, jigsaws cut with a back and forth or up and down motion. Blades vary in tooth numbers and composition. They're used to cut metal and plastic as well as wood. Fine-tooth blades are used for sawing veneers, while coarse tooth-blades are for rough and fast work.

Jigsaws are completely different than circular saws. Instead of revolving blades, jigsaws cut with a back and forth or up and down motion.

Jigsaws are easily operated with one hand. That allows you to hold your work solidly with your other hand. Jigsaws nicely cut small, intricate pieces. One of the best applications for a jigsaw is interior cuts, like an inner circle or rectangle. You simply drill a pilot hole and insert the blade. With some practice, you'll soon learn to make plunge cuts

with your jigsaw.

COMPOUND MITER SAW

Compound miter saws are a step up from regular circular saws. They still take the same rip, crosscut and combination blades as circular saws. However, they're fixed in an arm or a track much like the radial arm saws they've almost replaced. Common blade diameters are 10 and 12-inch, but compound miter saws can be fitted with the smaller 7 1/2" size. For a miter saw, one should always use a **quality crosscut saw blade**.

These electric saws are exceptionally versatile tools. They've replaced the standard miter box and backsaw in most shops. Beginners find that powered miter saws make far more accurate cuts for **miters, bevels and compound angles**. They're easily set at standard angles like 22 1/2, 45 and 90 degrees, but they can be adjusted for every angle in between. That includes left and right cuts.

Powered miter saws evolved from the standard cut-off or chop saw. Now they're available in models with sliding arms that extend cut lengths. Their power heads also tilt to each side, allowing for a combination of miter and bevel cuts. Practically any series of angles can be cut with a compound miter saw.

TABLE SAW

Most beginning woodworkers invest in a table saw early in the game. Table saws produce cuts that aren't easily achieved with other saw types. They're designed like upside down circular saws where the blade is exposed from below the saw table or work surface. Blade depth and angles are easily adjusted for precision.

There are three main table saw versions. All three are suitable for beginning woodworkers. It depends on the size of work you'll be doing and the location. You might want a fixed table saw that stays in one shop location or a portable saw that can be stored away. These are your table saw choices:

- **Cabinet table saws are heavy and made to stay put.** The name comes from their motors being enclosed in a lower cabinet with the blade driven by a belt and pulley system. They're excellent for all-purpose work from lumber-ripping to panel-cutting. Many beginners choose a cabinet table saw as their workshop centerpiece.
- **Benchtop table saws are lighter-duty.** They're made to be portable, so they're perfect for moving between locations as well as conveniently storing when not being used. Most benchtop table saws are direct drive. That lets

them remain compact, but they tend to be noisy.

- **Contractor table saws are the tightest designs.** Building contractors prefer them for quick and easy cutting on jobsites where time and space is a premium. Contractor table saws are also economical, making them a good choice for beginners learning their tasks.

For a table saw, also known as a chop saw or chop box, one should always use a quality blade, such as the [carbide tip combination blades](#) or [rip saw blades by Luxite Saw](#).

Bandsaw

There's nothing like a bandsaw for ripping rough stock or making intricate curved cuts. These power tools are a combination of circular and saber saws, where teeth are fixed on a continuously looped, flat steel band and revolve around upper and lower pulleys. A flat table is mounted between the pulleys that tilts for angled cuts.

Bandsaws come in many sizes. It depends on the size of stock you'll be cutting and how intricate of cuts you want to make. There are two main bandsaw characteristics to be aware of, and each determines your bandsaw size choice:

- **Depth capacity is how far the bandsaw blade is exposed between the pulleys.** It's also called face opening and varies between 4" for small bandsaws up to 12" or more for big machines. This determines how thick your material capacity is.
- **Throat depth measures from the blade teeth to the back of the support frame.** This determines how wide your stock can be. A deep throat capacity makes it easier to make curved cuts where work needs turning on the table.

Bandsaw teeth come in coarse designs for fast cuts and fine teeth for smooth, slower cutting. Blade width is important with bandsaws. Wide blades are more stable for ripping, while thin blades make curved cutting easier.

For best operating use, be sure to also invest in [quality band saw tires](#) for your bandsaw.

Handsaws

There will always be a place for handsaws in every woodworker's shop. Handsaws are so simple and easy to use for quick work or where detailed, precision cuts are required. The nice thing about handsaws is there's no bulky weight, clumsy cords or batteries that die. Handsaws are always ready to go, and they're not expensive.

Handsaws have been around for hundreds of years. They're basically a toothed steel blade with a wooden handle designed to slide back and forth, cutting the work. But there's far more to handsaw application than most beginners think. Here are some handsaw designs to consider:

- **Ripping Handsaws:** Cut with the wood grain
- **Crosscut Handsaws:** Cut across the wood grain
- **Combination Handsaws:** Can do both rips and crosscuts
- **Backsaws:** Have rectangular blades with braced backs for miter cuts
- **Carcass Handsaws:** Larger and stronger backsaws
- **Coping Handsaws:** Like jigsaws and bandsaws for curved cuts
- **Dovetail handsaws:** For fine dovetail joint work
- **Keyhole handsaws:** Made to cut interior holes

Beginning woodworkers should invest in the best quality handsaws they can afford. Most frustrations with hand sawing come from cheap or dull blades. A sharp blade with excellent teeth can cut wood nearly as fast and true as an electric saw.

FILING, PLANING, AND SANDING SUPPLIES USED IN WOODWORKING

Once wood pieces are cut to a rough shape, they need more work to present an attractive, finished appearance. No matter how fine your saw blade is and how nice the quality, you'll still need some sort of filing, planing and sanding supplies. Here's what beginning woodworkers should consider investing in:

Planes

Planes are cutting tools rather than abrasive, sanding devices. All types of planes use a fixed blade to shave off wood fibers, letting them take shape and become progressively smoother. Blade size and depth are the key variables in how much material can be removed at a time.

You'll hear several plane names that sound somewhat foreign, if not amusing. Rabbet planes and jack planes both shave wood, but they have considerably different applications. You'll also hear terms like jointers, blocks and spokeshaves. As well, you'll hear them referred to by numbers. They're all types of hand planes that beginning woodworkers should investigate. These are the range of hand planes you might want:

- **Jack Plane:** These tools remove a lot of material in a pass. It's a "jack-of-all-trades" tool because there are both curved edge and straight edge types available — for smoothing or jointing, respectively.
- **Block Planes:** These planes are smaller and stout. They're best for tight work where very smooth joints are necessary.
- **Jointer Planes:** Like jack planes, except they're designed to smooth edges and join pieces together. Typically,

- Jointers have long frames.
- Rabbet Planes:** Used for cutting right angle grooves along board edge grain. These joints are called rabbets, which differ from inside grooves termed dadoes.
- Scraper Planes:** Made to scrape fine fibers off wood surfaces for super-smooth finishes. These planes are sometimes called cabinet scrapers.
- Spokeshaves:** Hand planes designed for curved surfaces. Originally, they were for wagon wheel spokes, but they found their useful way to all woodworkers.

Orbital Sander

If you're going to buy one electric wood-finishing tool, it should be an orbital sander. These fast-action machines take all the strain out of hand sanding and do it a lot quicker. Orbital sanders differ from inline tools like belt sanders. They use sandpaper pads revolving in a circular or orbital pattern.

Regular orbital sanders take a circular abrasive sandpaper disk and spin it in a circle. Although they remove material fast, they tend to leave swirl marks that are hard to remove. A random orbital sander is your best buy. They don't circulate. Rather, they oscillate in a random manner leaving the wood surface silky smooth and mark-free.

Hand Files

Often, there's no better tool than a hand file to shape and smooth wood. Hand files are inexpensive and last a long time if you buy ones made with quality steel. Once dull, hand files are best replaced rather than trying to sharpen them. Here are your main hand file choices:

- Rasps are rough-edged tools with coarse teeth.** They're used to remove large amounts of wood for general shaping, then allow finer files to take over.
- Half-round files have a flat surface on one side and a curved face on the other.** This lets them be worked on straight and curved surfaces.
- Mill files are flat on both faces.** They usually have coarse teeth on one side and fine on the reverse. Mill files also have toothed edges for tight spaces.

Rotary cutters are like hand files, except they're designed as electric drill bits. You place them in your drill chuck and let

the rotary abrasive action remove material. Rotary files are available in different patterns and cutting grits.

Hand files are also used to sharpen your other woodworking blades and bits. Metal files typically have extremely fine teeth and are composed of high-grade steel. As with any tool, you usually get what you pay for, and it's worth investing in high-grade hand files.

ASSEMBLY TOOLS FOR WOODWORKING

Cutting and smoothing wood is only part of your overall woodworking process. Once your components are properly sized and smooth enough for finishes, they still need assembling. Successful woodwork assembly depends on two things. You need precision joints that will fit. You also need the right tools to assemble and securely fasten them.

These are the basic assembly tools for beginning woodworkers:

HAMMER

There's no such thing as a universal woodworking hammer. Perhaps a carpenter's claw hammer is as close to a one-size-does-everything pounding tool, but there are dozens of different types of them, too. Woodworking hammers are normally asked to do two tasks. That's to pound and pry. How well they accomplish that depends on a few things:

- **Head design including face size and weight.** Some heads are smooth, as in finishing hammers. Some have serrated faces for gripping nails and fasteners, like you see in framing hammers.
- **Claw design including length and curve.** Finishing hammers have long and pronounced claws, while framing tools use a straighter edge used to split materials.
- **Handle composition is critical for comfort.** Most beginning woodworkers prefer a wooden or composite hammer handle. They deliver less shock when striking. Framers like steel handles. There's more shock, but steel adds to the weight, so there's more driving force. Steel handles also don't break easily.
- **Overall weight is important.** Hammer weight is measured in ounces. Lightweight hammers are 8 to 10 ounces. Intermediate hammers are 16 to 20 ounces, while heavy-duty ones weigh 24 to 32 ounces.

Hammers vary in purpose as well as composition. Beginning woodworkers have a myriad of choices and need to identify what they'll be using their hammers for before purchasing. These are the main types of woodworking

hammers:

- **Finishing hammers are all-purpose.** This should be your first purchase as they're so handy.
- **Framing hammers are tough.** However, they're a bit of overkill for most woodworking projects.
- **Tack hammers are like brad drivers.** They're for small work and usually have two different head sizes with no claws.

MALLET

Don't confuse mallets with hammers. Both are striking tools, but they have entirely different applications. Hammers are usually steel-faced, but some are brass or plastic. Mallets have large wooden or leather heads and detachable handles to accommodate various head sizes.

The difference between hammers and mallets is their striking shock and surface impression. Mallets are much softer than hammers and absorb shock rather than deliver it. They also leave minimal striking marks, making mallets perfect for tapping wood joints together.

Beginning woodworkers should understand that you never, ever use a steel hammer on chisels. Shock from steel hammers causes chisels to stab or jab at the wood, leaving rough finishes. However, tapping chisels with a mallet lets them smoothly slice through wood with consistent pressure.

POWER DRILL

Power drills can be a beginning woodworker's best friend. Only a few old-time craftspeople still use a brace and bit or a hand drill. Electric powered drills are used so often in the workshop and for so many reasons. They're not only for drilling holes. You can buy all sorts of attachments to turn your electric drill into other tools, too.

If you're buying your first power drill, seriously consider getting a corded model. Drills running on 110/120-volt currents have considerably more torque and longevity than cordless drills. Some may find cords get in the way, but they'll never let you down with a weak charge.

If you'd rather go with cordless power drills, they are rated in voltage. Early models were 7.5-volt, but that quickly upgraded. Now, 18-volt cordless drills are a wise choice for beginners. They're not much more expensive than 14-volt drills and have considerably more strength.

Power drills are also rated by their chuck size — 3/8" chucks are the common medium size, and heavy-duty chucks are 1/2". Drills are available in keyed models or keyless chucks that make bit changing easier.

SCREW GUN

Screws are the all-round best fasteners for woodworking. They hold tight and can be removed when disassembling, making temporary joints or when mistakes happen. You certainly don't want to be without your standard hand

screwdrivers, but investing in a powered screw gun makes driving screws faster and simpler. Screw guns are especially valuable when you have a job with multiple screws.

Screw guns are extensions of the power drill family. Most screw guns are now cordless, which makes them convenient. The main difference between a true screw gun and a power drill is the inside shape of the chuck. Screw guns are designed to insert hexagonal or six-sided bit shanks. This makes slippage non-existent.

WOODWORKING TOOLS FOR MEASUREMENT AND ANGLES

They say measure twice and cut once. That old woodworker advice is the best there is. Some other advice is to buy good quality measuring equipment that's accurate and easy to read. Below are the main measuring and angle checking tools you need as a beginning woodworker:

SQUARES

It's next to impossible to create decent woodworking projects without an assortment of squares. Good squares let you create and verify all sorts of angles. Most squares also have measuring markings engraved on their surface. This lets them double as measuring rules. These are the squares you should have:

- **Framing Squares:** Large, right angle tools for bigger work surfaces
- **Try Squares:** Smaller, right angle hand devices for quickly verifying squareness
- **Combination Squares:** Used for precise checking of angles and distances
- **Speed Squares:** Quickly let you check 90 and 45-degree angles
- **Miter Squares:** Best for setting angled miter cuts
- **Bevel Squares:** Allow you to recreate an existing angle and transfer patterns

Dividers, compasses and depth gauges aren't technically squares, but they're simple and invaluable woodworking tools. They cross into the other family of measuring tapes and rules.

TAPE MEASURES

Every woodworker should know at least one tape measure hooked on their belt.

EVERY WOODWORKER SHOULD HAVE AT LEAST ONE TAPE MEASURE HOOKED ON THEIR BELT.

Every woodworker
should have at
least one tape
measure hooked
on their belt.

It'd be hard to have all tape measures attached to you, though, because there are so many types. Here are the basic tape measures to consider:

- **Retractable Steel Tapes:** These are the most common measuring tools. They come in lengths from 12 to 30 feet.
- **Flexible Reel Tapes:** You can get them in fabric or steel in lengths over 100 feet.
- **Folding Rules:** Notice they're not called rulers. These are rigid measuring sticks for high accuracy. Most rules fold into multiple sections.
- **Yardsticks and Straight Edges:** These are in the ruler family and are handy for quick takeoffs and laying straight lines.

OTHER NECESSITIES FOR SUCCESSFUL WOODWORKING PROJECTS

Now that you've got an idea about what beginning tools you need for cutting, finishing, assembling and measuring woodwork projects, you'll need a way to hold them while underway. Clamping devices are indispensable in woodworking shops. The two best holding tools are sawhorses and your quality work bench:

SAWHORSES

Sawhorses are one of the first investments you should make as a woodworker. They're simple four-legged creatures that nicely balance and support long lumber lengths and heavy weights. Sawhorses are usually used in pairs, but many woodworkers have half a dozen sawhorses around.

You can make your own rigid sawhorses out of wood. That's an economical way to use up scrap materials. But there are so many commercial sawhorses available that are made from steel, fiberglass and plastic. It might not be worth your time to manufacture sawhorses unless you want the practice.

QUALITY WORK BENCH

If there's one real expense to consider as a beginning woodworker, it's to invest in a quality workbench.

Yes, you can make your own out of 2x4s and plywood, but you're never going to get the usefulness you'll get with a professional grade, quality workbench. You'll use it for every project and all the time. Here are features to look for in a quality workbench:

- Solid, hardwood construction
- Adjustable base for accurate leveling
- Two various sized vices
- Large working surface with built-in stops
- Lower drawers for storing tools
- Free-standing with 360-degree access

INVEST IN QUALITY WOODWORKING TOOLS

One last beginning woodworker tip to leave you with is investing in quality tools. That's what Luxite Saw's products are all about.

Our [bandsaw tires](#) and [saw blades](#) are backed by five-star reviews. All of our products are made proudly in the USA and our blades are manufactured in-house by our team of blade specialists. Our blades cost slightly more than a typical [miter](#) or [table saw blade](#), but craftsmen swear by their durability and resistance to wear.

10 Essential Woodworking Tools To Start Your Shop

Woodworking Fundamentals · June 18, 2020

NO PARTICULAR ORDER

1. Table saw
2. Router
3. Chisels (sharp ones)
4. Orbital sander
5. Bandsaw
6. Dust collector
7. Jointer
8. Planer
9. Miter saw
10. Circular saw

TOOLS EVERY WOODWORKER NEEDS

Like most any list on the internet, this is based on my experiences and is just my opinion. I have seen some amazing woodworkers that can build things I couldn't dream of using only hand tools. So you don't have to own every item on this list just to start making cutting boards to sell at the local farmers market. However, if you want to make a variety of projects, and not have to spend hours creating a jig to do the job of a fairly common tool, then this list is a good place to start.

This is also going to assume you have some basic home improvement tools already. Things like a tape measure, cordless drill, level, hammer, etc. This list is that next jump towards being a more serious woodworker. A woodworker that might want to start generating income. And don't think you need all of these tools at once. Like most people, I built my collection slowly over the course of several years. And it's still growing!

GOOD VS BEST TOOL

I will go through each tool and explain why I can't live without that particular tool. I will then give a couple options I recommend buying. A totally decent, reasonably priced option. In addition to a "best" option. I will also give my recommendation as to if I feel it is best to purchase that tool new, or save some money and purchase it second hand if possible.

I always try and be as transparent as possible with everything I do. So you should know none of the tools below are sponsored in any way. They are all tools that I believe are the best for the job. Or at least

The ten most important tools you should add to your woodworking shop. These are the tools beyond a socket set and cordless drill. When you are ready to make ...

the best value. That said... I did include affiliate links to any item that I could. Which means, if you click a link below and purchase an item I will get a small percentage of the sale. Which might not sound like a lot, but some months it can make a real difference. So if you feel like supporting my page, I really appreciate you clicking through one of my links.

TABLE SAW

In my opinion this is where it all starts. Everyone should own a table saw, no matter how small the shop. Sure you could use a miter saw/circular saw combo and accomplish most every task you'd use a table saw for. But the versatility, speed, array of jigs, and accuracy of a table saw make it as my number one tool.

If you google "Table saw jigs" you will get an endless list of jigs that can make your life easier. Jigs that can even replace many of the tools on this list. You can turn your table saw into a jointer, cut perfect 45 degree miters (even a miter saw can't do that), make a crosscut jig that can essentially replace your miter saw, and I have even seen guys turn round bowls on a table saw. No lathe needed! In addition to the jigs, a table saw also doubles as a medium sized work bench. Adding an outfeed table creates an excellent workstation that is totally functional. Don't be afraid to buy a used table saw if you are at all handy. There isn't much that can't be fixed/adjusted so long as the motor works.

Good option

I owned a ridgid contractor saw for several years and was very happy with it for the most part. It had totally decent power, an acceptable fence, and only cost around \$500 new (edit* up to \$750 now!). I was able to find mine on Craigslist for \$250 though. If I were just starting out I wouldn't think twice about buying this saw again.

Best option

As long as we aren't including \$20k giant sliding cabinet saws, this one isn't even debatable. Sawstop is the answer. End of discussion. Removing the safety feature, Sawstop would still likely be the best saw to purchase when compared to the competition. Then include the fact that it is a table saw that can't cut you... The competition is over. I own a 3hp PCS and cut 2.5" white oak with a full kerf blade and no burning. So it has plenty of power. There is a 5hp version available if you want a little extra though. I haven't tried the 110v 1.75hp model, but I'm sure its good enough if you don't have access to 220 power.

Maybe my favorite feature of the Sawstop is that everything is adjustable. So if some part of it is wacked out of tune, you can make it right again. I purchased my 52" 3hp PCS used for \$1500 on Craigslist (\$3000 new). While I got a good deal on the saw, it was beat up pretty bad. After about \$150 in replacement parts and probably a days worth of work, I had a brand new saw that runs like a top three years later. [ridgid contractor saw](#)

[BUY ON AMAZON](#)

BANDSAW

While not the most critical tool in the shop, I find the bandsaw to be the most fun tool in my shop. Cutting thin veneers, bookmatches, or complex curves is really only possible on a bandsaw. While any tool needs to be respected, it doesn't summon the fear of table saw kickbacks, or miter saw accidents. You can break down 4" thick chunk of wood in a matter of seconds without having to worry about a piece flying up and taking an eye out. Just like a table saw, not much on a good bandsaw that can't be adjusted. So don't hesitate to buy

used.

Good option

The old generation Jet bandsaws are a dime a dozen on Craigslist where I live. That was my first bandsaw and it worked alright for me. Low on power, accuracy, and looks. But it got the job done and only set me back about \$300. If you plan on keeping it for a few years, get yourself a good carbide blade to maximize the power and accuracy.

Best option

I will limit this to the best 14" bandsaw option to keep it in the small shop realm. Don't get me wrong, I'd love to have an Italian built 18" Laguna for \$5000. Or better yet, a 2500 pound 20hp 36" bandsaw like you see in some production shops! For now, neither of those are realistic though. I own the 14" Laguna BX and really like it. It is a step up from the very popular Laguna 14/12. I would be perfectly happy with the 14/12, so don't hesitate buying one if you're considering it. I will say the extra HP and foot brake on the BX are quite nice. I can't tell you how many times I got myself in a jam and couldn't take my hands off my piece to turn the machine off. And was so thankful I had the foot brake/kill switch to stop the blade in less than a second.

I have personally tested the 14" models of Powermatic, Jet (new model), Laguna, Rikon, and Grizzly. I would absolutely only consider owning the Laguna. However, I haven't tested many of the larger models. I understand most of those brands make pretty nice machines 17" and up.

ORBITAL SANDER

Following the super sexy tools like a table saw and a bandsaw you might be surprised to see a simple orbital sander. Don't underestimate the orbital though. I would probably rank this as my second overall most important tool. The downside of an orbital is that it can really only do one thing, sand. Where table saws, planers, and bandsaws can do a variety of tasks to replace other tools in the shop. I still believe an orbital sander is invaluable, and not a prohibitive cost to get into. Don't risk buying sanders second hand. Too many variables and things that can break on them. For any orbital, buy new.

Good option

I have owned a lot of Bosch tools over the years. If you ever aren't sure which brand you should get, you can almost always trust that any Bosch tool will be excellent quality. From miter saws, routers, sanders, and jig saws, Bosch might not always be the absolute best in particular area, but it will be a quality tool that will last a long time. That said, I recommend getting a 5" Bosch orbital sander if you are on a budget.

Best option

When first learned about Festool I thought it was a joke. I specifically remember laughing out loud when I saw their orbital sander cost \$500. I couldn't imagine spending that money when my Bosch seemed totally fine. Then I used the brushless 150mm (6"). You really have to use one to believe it. It's like getting in a Ferrari after enjoying your commute in a Camry. It is that good. It starts and stops basically instantly, you barely feel it vibrate in your hand, the pattern is absolutely amazing, and if you do any epoxy work, you need this sander today.

[BUY ON AMAZON](#)

[BUY ON AMAZON](#)

JOINTER

While the jointer is not my personal favorite, I know a lot of woodworkers who would put the jointer at the top of their list. A critical

tool for anyone who wants to do more traditional projects that require dimensional lumber for perfectly square glue ups. Many people assume a planer can do the job of a jointer, however if you put a curved board through a planer, you end up with a thinner curved board most of the time. Some will say to buy a jointer before a planer, however I say buy a planer first and make a jointing jig for it. If you are shopping any stand up jointer 6" or larger, don't be afraid to shop used. However, some used jointer beds can be a project to get set up just right.

Good option

I started out with a benchtop jointer, and it was ok. But I wouldn't recommend it here. I would invest in a 6" Jet jointer to begin with. Well built, not too hard to move around a small shop, and readily available second hand for \$300-500.

Best option

You can spend some big dollars on a jointer. So while I'd love a 12" helical Powermatic, \$7000 on one tool isn't realistic for most of us. So I will say to get the best 6 or 8" spiral/helical jointer you can afford. The spiral heads save an incredible amount of time during blade changes, offer increased cutting capacity, and longer blade life than HSS straight blades. The 8" grizzly parallelogram jointer is about the best entry level jointer (borderline professional) you can get. You won't find a better jointer for under \$2000. If you're curious, I have a second hand Shop Fox 8" helical head jointer with dovetail style beds. Not my dream jointer, but probably won't get rid of it for anything short of a 12" helical.

PLANER

A planer is a shop necessity in my opinion. Unlike a jointer, I feel that you can get by with a benchtop model if space and/or money is an issue. You might be surprised how much wood you can move with a little lunchbox planer, but it is nothing compared to a free standing model. Whether you are shopping big or small, don't be afraid to shop used. Just be prepared to throw out the blades on the machine you buy. Nobody has ever sold a planer with sharp blades.

Good option

I'd start with a Ridgid 13" planer if you are on a budget. Decent power and accuracy, and not too hard to find second hand. The consensus best of the lunchbox options would be the Dewalt 735 planer though. If you have more money than space, don't hesitate to drop the \$600 on it. However I generally see them closer to \$350 on the second hand market if you can shop around.

Best option

Bigger the better. And for gods sake get a helical if you can afford it. 15 or 20" Grizzly is a great entry level machine. I have the 5hp helical 20" grizzly. While the finish is a little "chattery" due to the helical head, it sands out very fast. A friend of mine has an aftermarket helical head he spent \$6000 on for his vintage Powermatic that he claims give a glass smooth finish, straight from the planer. So again, its a matter of getting the best you can afford.

DUST COLLECTOR

Don't you dare skip to the next tool. I know, dust collection is boring. We want tools that make sawdust, not pick it up. But bite the bullet early and get yourself some real dust collection. Health is the obvious priority. But don't forget about the increased productivity that happens in a clean shop. Not to mention increased sanity. I wouldn't hesitate to buy a second hand dust collector, but good ones rarely get sold. So shop new or used confidently.

Good option

Instead of getting an old cloth bag dust collector off Craigslist, get yourself a good cyclone separator and hook it to a shop vac or old dust collector motor. Those bags are awful for your lungs, and the cyclone separators are pretty cheap. Oneida Air Systems makes a wide variety of systems for just about any size shop or budget.

[BUY ON AMAZON](#)

[BUY ON AMAZON](#)

Best option

HEPA is the name of the game. If it's not a HEPA system, it's not really a dust collection system as far as your lungs are concerned. There are a lot of good HEPA options out there, but the industry standard is Oneida Air Systems. All they do is dust collection. And they do it better than anyone. I just got the ghp Dust Gorilla. Which is a full blown professional system. Probably overkill for my sized shop. But I wanted a system I could grow into, and not end up replacing in a few years. For a smaller shop, I'd take a long look at their Super Cell. Its HEPA certified, and unlike my giant gorilla system, can take hoses as small as 1". So you can hook it to tools like routers and sanders. Replacing the need for additional HEPA vacuums.

MITER SAW

Just about every small shop has a miter saw. While I think they are useful, they are far from my favorite tool. First, they lack accuracy. I mean true accuracy. Try cutting picture frame 45's with even a high end miter saw and see what I mean when you put them all together. Being off 1/10th of a degree adds up quick with that many cuts. Second, they are a dust collection nightmare for all but the Festool Kapex. Finally, they are super dangerous. I have scared myself too many times to count with my sliding miter saw.

So why is the miter saw on this list? They are affordable, portable, and fast. Great for cutting long 2x4's, 3.5" hardwood chunks, and even non ferrous metals like copper pipe (be careful though). Most premium brand miter saws will outlast you, so I wouldn't be too worried about shopping used.

Good option

I had a Ryobi miter saw for years. It wasn't too accurate or smooth, but it never broke. So if you want a good value, I think Ryobi is a totally viable option. A step up from the Ryobi would be the Dewalt, Makita, and Bosch. Any of which I'd be happy with. I recommend getting a 10" vs a 12" though. That way you can interchange blades with your 10" table saw.

Best option

Festool does just about everything better. While I don't own the Festool miter saw (Kapex), I wish I did. But not so much that I have bought one yet. The dust collection is amazing, accuracy is as good as it gets with a miter saw, and the fit and finish blow any of the other brands out of the water.

ROUTER

The router should be way up on your list. While a little intimidating when you first start, it isn't a hard tool to get the hang of. Just leave the gloves off, and put the glasses on. 20,000 RPM can throw a lot of debris around, and can suck a glove right in. So it isn't a tool to take lightly. A router isn't just for rounding table edges. Although it is great for that. You can cut inlays, flatten tables with a router sled, cut sliding dovetails or dados, in addition to an endless list of other jobs. Routers can be a little more sensitive to breaking, so I always buy new.

Good option

I own four or five routers. And honestly, I haven't found the perfect router yet. My first one was the Bosch 2.5hp with a plunge and fixed base. Which surprisingly is still the one I recommend the most. It plunges smooth, can comfortably free hand with it, has decent power, and mine has lasted about five years or so of heavy use. It currently resides in my router table. I have had some friends that had the same router and had the on/off switch go out on them for what it's worth. But I wouldn't hesitate to buy this one again.

[BUY ON AMAZON](#)

Best option

Of all my "best options" this one I am the least passionate about. I have the Festool 1400, and it is a very very nice router for many tasks. Plunges silky smooth, amazing dust collection, and precise adjustments. The only real complaint is part of its greatest strength. The dust is funneled right into the center of the bit, which makes it perfect for extracting when hooked up to a vac. The downside is that it completely obstructs the view of what you are working on. So free hand routing is essentially out of the question. If you don't do any free hand work for inlays or bow tie joints, then no worries. Buy it and don't look back. However, if you do some free hand work, make this one your second router.

CIRCULAR SAW

Every adult should own a circular saw of some kind. Or at least be able to borrow one. No tool can cleanly break down a sheet of plywood, cut a slab to size, or cut random odd shapes. Ok, maybe a jigsaw. But a circular saw does it much better. Like other small tools, I prefer to shop new. Although, I have never had a circular saw break on me, so probably fine to shop used if you want. In fact, I used my dad's old craftsman for years. No telling how long he had it before me. You know what, I changed my mind. Go ahead and buy used.

Good option

I generally prefer corded tools to cordless. Sounds backwards, but the corded tools have a lot more power. Although the battery game will probably catch up eventually. I have a 7.25" Milwaukee and don't have any complaints. Although you are probably safe with any of your favorite premium brand circular saw (Bosch, Dewalt, Ridgid, Makita).

Best option

The Festool track saw is on a lot of woodworkers bucket lists. And for good reason. Just set the track where you want to cut, and slide the saw on the track for a dummy proof cut. You can even cut lines so sharp you can go straight to glue up right from the saw. Add in the dust collection, and you have a indispensable tool. BUT... it's not a perfect tool. It is pretty under powered. Capable of cutting just short of 3", that will take you around four or five shallow passes to do so. At least in hardwood. Also, the dust collection is just average. I feel they are so close to the perfect tool, maybe a 1" bigger blade, a lot more motor, and I'd be fine with the average dust extraction. Festool, go to work.

CHISELS

I bet you thought I was going to leave the hand tools off this list, didn't you? Chisels are almost a tool for the prerequisite list of tools everyone should own. So I will take it a step further here. You need really sharp chisels, not necessarily expensive chisels. I have chisels that cost \$5 each and some that cost \$100 each. Properly sharpened they both will get the job done for 99% percent of the people reading this. Some Japanese chisels can get a little sharper than western style, but that is a negligible difference for most everyone, including me. A higher quality western chisel edge will last a lot longer than an edge on a Home Depot chisel though. If you have time to frequently sharpen/hone, you can do everything with a Dewalt construction chisel if you really want.

One advantage to buying used is that with any luck, a good woodworker has already flattened your chisel backs for you. The downside is that quality older chisels tend to appreciate in value. Personally, I'd prefer to have a new chisel that I know hasn't had the temper ruined by some kid on a bench grinder 20 years ago. That said, if you really want a vintage Stanley collection, get yourself a vintage Stanley collection.

Good option

I won't make this a blog about sharpening, but I'll touch on a few points to make purchasing easier. The first thing you need to do to any chisel (cheap or expensive) is flatten the back. A big difference from some cheaper chisels to more expensive ones is how flat the back comes from the factory. Narex makes a really decent chisel for a really decent price. I have found the backs to need a bit more work than a higher end chisel though. Additionally, with the ones I've purchased, about 1/5 required A LOT more work. While most weren't great to start. Once flattened and sharpened, they perform as well as any chisel in my drawer though.

Best option

There are a lot of great options out there, but I love my Blue Spruce chisels. They are one of the few chisels that let you customize the look and feel. You get to choose the handle material and shape for every chisel you buy. I am rather particular about my handles, so this is a huge feature for me. Also, how cool is a full set of curly maple or cocobolo custom chisels.

WHAT DID I MISS?

Of course there are more tools that could/should be on this list. Let me know in the comments what tools you think should have made the list.

Honorable mention

- Hand plane
- Drum sander
- Jigsaw
- Block plane
- Marking knife
- Belt sander
- Scraper
- Card Scraper
- Quality square

Hello Cam,
What about all those smaller hand tools like your marking knife,
I mean all. I love those, they don't have cords.

I know there are not a lot of them.

Regards,
Alvarado, Larry

If you enjoy woodworking and are considering building some furniture or crafts, then TedsWoodworking collection of 16,000 plans isn't something you SHOULD check out, it's something that you would be insane not to... The level of precision saved me thousands of dollars and provided me the joy of building my own custom bookshelf. The wife loves it! here is the link to download the entire "TedsWoodworking" 16,000 plans package:

Good discussion however misleading stating none of the tools here are sponsored since in your video you state that sawstop provided you the saw for free.

 **Bmiller** 5 months ago · 0 Likes

That should be sawstop.

 **wes** 5 months ago · 0 Likes

Thank you for all the great info - my plan is to ultimately have the festool random orbital sander in conjunction with one of their dust extractors. however budgets prevent me from sourcing both at the same time - Would you buy the sander first or the vacuum? Thanks

 **Chris** 6 months ago · 0 Likes

I'm curious if you've ever worked with the Harvey C14? Pretty close comp to the Laguna 14Bx bandsaw. I'm close to pulling the trigger on one of them and would love any thoughts...

 **John** 6 months ago · 0 Likes

Hi Cam. No mention of a drill press anywhere. Being able to produce straight vertical holes seems important to me. Sure dowels aren't as popular as perhaps domino's/biscuits and pocket hole jigs are very common but personally I feel the humble old drill press still has a place.

 **Frank Conci** 6 months ago · 0 Likes

I am considering a power scroll saw for some signage and lettering work because I am too impatient to spend the hours with a hand unit. Do you have any recommendations or could I do the cutting on a band saw?

 **Mitch Harvey** 7 months ago · 0 Likes

Good info

 **Randy** 8 months ago · 0 Likes

Got me the KAPEX Saturday morning.
Probably the only one left in Phoenix.
All of can say is, "I am now a decent wood worker." Not from talent, but what I learned I could now do just from having it.
Favorite feature?

Very good info, it was exactly what I was looking for and the most concise info I have found with practical suggestions. I will be taking your advise when setting up my new shop. I hope I have the space, 24 by 24 garage space.

Paul Pyles 2 years ago · 0 Likes

Thanks for the useful information. I will have to piece mail my

setup together. Just like I did my blacksmith forge. I have a lot of hand tools already so that a plus. What would you recommend for a lathe?

 **Stuart** 2 years ago · 0 Likes

You are nuts. Who has the money to buy all this gear. In Australia this would be at least 10k even if you bought rubbish

 **Jeremy Kramer** 2 years ago · 0 Likes

In the USA you can get all this for as little as 1000 used or get a decent mix of used and new like I did for around 2000. Where there is a will there is a way. For example, I just bought the Makita track saw because I'm left handed and I always miss the mark with my circular saw but before I could drop \$600 I cut a piece of wood the exact thickness between blade and edge of the base plate , then with a straight edge clamped down against the spacer board, I had a makeshift track saw. And if your a real man you probably should have at least a circular saw? That same circular saw can be mounted upside down to a board and turned into a table saw. A heavy object and a razor blade can work as a chisel, and a cheap jigsaw can take the place of a bandsaw in at least some applications. This blog is meant to be helpful to those with a PASSION for woodwork. Cam does amazing work and has inspired a lot of us to try to achieve even half of his quality. Enough said.

 **Caleb** 2 years ago · 0 Likes

How does this make him personally nuts? For the great majority of people, the information in this article is very honest and gives multiple options depending on your budget. It sounds to me like you need to move!

 **Wood ship kits** 2 years ago · 0 Likes

That's really nice post. I appreciate your skills. Thanks for sharing.

 **Keisuke Nakanishi** 2 years ago · 0 Likes

I'm Kei, who asked me a question before.
Good day to you!

Good day to you!
Hope you are doing well.

May I ask about Festool Sanders that you introduced.
Which do you like better, ROTEX or ETS? I'm thinking of getting
one.
Thanks.

 **John H.** 2 years ago · 0 Likes

A good, flat, solid workbench with vise is critical in my opinion,
at least if you are going to use those chisels and other hand tools.

 **Tex Bender** 2 years ago · 0 Likes

On your Festool TS75 tracksaw, Are you using the W52/52 tooth
blade to make your cuts, both straight and 45°?

 **Cameron Anderson** 2 years ago · 0 Likes

I believe its a 36 tooth blade most of the time

 **Sven Leisegang** 2 years ago · 0 Likes

Thanks for this list. It's definitely useful for someone like me who
has inherited a few tools, and want to slowly expand my range.

 **Cameron Anderson** 2 years ago · 0 Likes

Thanks Sven!

The Way to Woodworking

Whether you are a beginner or a DIY professional, if you have a love for the craft of woodworking The Home Depot has got you covered. We have all the essential tools for woodworking that let you hone your craft. Our huge selection of drill presses and miter saws will put the power in your hands to complete your projects faster and easier. And whether you are looking for the strength of a powerful router or the versatility of a lathe, you can find everything you need to help with projects, large and small. If your carpentry plans also include building

materials, you don't need to look any further than The Home Depot. From wood and lumber to decking and fencing materials, it's all right here.

With the right tools and materials, what you build is only limited by your imagination and creativity. So why not have a little fun with the kids and teach them something at the same time? Our woodworker tools and woodworking supplies will help you put together an easy birdhouse, squirrel feeder or butterfly house. The kids will love to use our paint samples to add their creative touch, and will enjoy displaying the finished product in the backyard.

If you ever have questions or need a few carpentry tips, remember that The Home Depot also offers advice from woodworking specialists in our forums.

About Us
Peachtree Woodworking Supply, Inc.

Fellow Woodworkers,

If you are a new customer or a first time visitor of our on-line-catalog, let me be the first to welcome you and tell you a little about our company. Peachtree Woodworking Supply Inc. is a small woodworking supply company, based out of Atlanta, Georgia. As you surf through our web site you will find a great selection and various ideas for your own woodworking shop. Our goal is to provide you with the hard to find woodworking tools and accessories.

Thank you for your future and continued business.

David Hughes
President

Building Lifelong Relationships

At Peachtree Woodworking Supply Inc., we treat customers the way we expect to be treated ourselves. Individual consumers, hobbyist, small and large-sized business can be assured that our team of professionals are ready to help select the products and services that best suit your needs and budgets. We are in the business of satisfying customers. Our aim is to deliver the best products, the best service and the best value in the industry.

Customer Satisfaction Builds Business

Our focus on the customer is our formula for success. We understand that referrals from delighted customers do more to help Peachtree Woodworking Supply Inc. than any amount of advertising.

Always remember YOUR Satisfaction is OUR guarantee.

Click, Call, Fax or Come in:

- www.ptreeusa.com - A growing number of home and business customers use our Secure Online catalog to learn more about our products, get tech help and to make purchases.
- Telephone - (888) 512-9069 to talk to one of our knowledgeable sales representatives.

United States Patent and Trademark Office (USPTO)

USPTO OFFICIAL NOTICE

Office Action (Official Letter) has issued
on August 23, 2022 for
U.S. Trademark Application Serial No. 97120370

A USPTO examining attorney has reviewed your trademark application and issued an Office action. You must respond to this Office action in order to avoid your application abandoning. Follow the steps below.

- (1) [**Read the Office action.**](#) This email is NOT the Office action.
- (2) **Respond to the Office action by the deadline** using the Trademark Electronic Application System (TEAS). Your response must be received by the USPTO on or before 11:59 p.m. **Eastern Time** of the last day of the response period. Otherwise, your application will be [abandoned](#). See the Office action itself regarding how to respond.
- (3) **Direct general questions** about using USPTO electronic forms, the USPTO [website](#), the application process, the status of your application, and whether there are outstanding deadlines to the [Trademark Assistance Center \(TAC\)](#).

After reading the Office action, address any question(s) regarding the specific content to the USPTO examining attorney identified in the Office action.

GENERAL GUIDANCE

- [**Check the status of your application periodically**](#) in the [Trademark Status & Document Retrieval \(TSDR\)](#) database to avoid missing critical deadlines.
- [**Update your correspondence email address**](#) to ensure you receive important USPTO notices about your application.
- [**Beware of trademark-related scams**](#). Protect yourself from people and companies that may try to take financial advantage of you. Private companies may call you and pretend to be the USPTO or may send you communications that resemble official USPTO documents to trick you. We will never request your credit card number or social security number over the phone. And all official USPTO correspondence will only be emailed from the domain “@uspto.gov.” Verify the correspondence originated from us by using your Serial Number in our database, [TSDR](#), to confirm that it appears under the “Documents” tab, or contact the [Trademark Assistance Center](#).

- **Hiring a U.S.-licensed attorney.** If you do not have an attorney and are not required to have one under the trademark rules, we encourage you to hire a U.S.-licensed attorney specializing in trademark law to help guide you through the registration process. The USPTO examining attorney is not your attorney and cannot give you legal advice, but rather works for and represents the USPTO in trademark matters.
